PROFESSIONAL SUMMARY

Senior QA Automation Engineer with 5+ years of experience designing, developing, and maintaining enterprise-grade automation solutions across hospitality, banking, retail, and insurance domains. Strong expertise in Playwright with TypeScript and Selenium WebDriver with Java, with hands-on experience in UI, API, cross-browser, parallel, and CI/CD automation.

Experienced in building scalable Page Object Model frameworks, reusable automation components, custom waits, assertions, reporting, logging, retry/recovery mechanisms, and clean architecture-based utilities. Skilled in REST API testing using REST Assured and Postman, GraphQL validation, SQL-based backend validation, Jenkins, and Azure DevOps.

Hands-on with AI-assisted automation using GitHub Copilot, Claude Code, prompt engineering, and MCP concepts for test generation, framework development, debugging, and automation productivity. Strong experience collaborating with developers, business analysts, and enterprise stakeholders across Agile SDLC/STLC environments.

CORE SKILLS

Playwright Automation • TypeScript • Selenium WebDriver • Java • JavaScript • Playwright Test • TestNG • Page Object Model • API Test Automation • REST Assured • Postman • GraphQL • SQL / MS SQL Server • Jenkins • Azure DevOps • Git / GitHub • CI/CD • Cross-Browser Testing • Parallel Test Execution • Regression / Smoke / Sanity Testing • Framework Architecture • SOLID • Design Patterns • AI-Assisted QA Automation • Agile / Scrum

TECHNICAL SKILLS

Automation: Playwright, Selenium WebDriver

Programming: TypeScript, Java, JavaScript

Test Frameworks: Playwright Test, TestNG, BDD, Cucumber, POM

API: REST Assured, Postman, GraphQL

Database: SQL, MS SQL Server

CI/CD: Jenkins, Azure DevOps

Version Control: Git, GitHub

Reporting: Playwright HTML Reports, Trace Viewer, Screenshots, Video Recording

Framework Design: SOLID, Factory, Singleton, Strategy, Dependency Injection, Clean Architecture

AI: GitHub Copilot, Claude Code, Prompt Engineering, MCP Concepts

Methodologies: Agile Scrum, SDLC, STLC

PROFESSIONAL EXPERIENCE

PUBLICIS SAPIENT — Senior QA Automation Engineer | Feb 2021 – Present

Global digital business transformation consultancy delivering enterprise engineering solutions for Fortune 500 clients across hospitality, banking, retail, and insurance.

Client: Marriott Hotels — Groups & Meetings Platform | Senior Test Engineer

Playwright, TypeScript | Hospitality | 2025 – Present

- Led automation strategy and framework execution for Quick Group and RFP booking workflows on Marriott's global group-booking platform using Playwright and TypeScript.
- Enhanced the Page Object Model-based automation framework by developing reusable utilities and components for maintainable test development.
- Translated business requirements into automated test coverage by collaborating with developers, business analysts, and stakeholders throughout Agile sprint cycles.
- Developed and maintained regression, smoke, and sanity automation suites aligned with sprint release cycles.
- Integrated automated execution into CI/CD workflows and generated execution reports for stakeholder visibility.
- Conducted framework handover demonstrations for client engineering teams and supported automation adoption.

Client: IDFC First Bank — Payment BC Platform | QA Engineer

Playwright, TypeScript | Banking & Payments | Dec 2023 – Nov 2025

- Designed and implemented a scalable Page Object Model automation framework for a multi-mode B2B payment collection platform supporting invoice-based buyer-seller transactions.
- Implemented cross-browser automation across Chromium, Firefox, and WebKit and integrated test execution into CI/CD pipelines for continuous regression testing.
- Used Playwright auto-waiting, network interception, Trace Viewer, screenshots, and execution reports for reliable automation and failure analysis.
- Developed reusable test utilities and components to standardize automation across payment authorization workflows.
- Generated and analyzed Playwright HTML reports and collaborated with developers and business analysts to validate critical business workflows and track defects.

Client: Wegmans Food Market — E-Commerce Platform | Test Engineer
Java, Selenium WebDriver, TestNG | Retail / E-Commerce | Nov 2022 – Dec 2023

- Automated critical test scenarios for a digital food marketplace using Selenium WebDriver, Java, and TestNG.
- Converted manual test scenarios into maintainable automation scripts aligned with application requirements.
- Authored and maintained test cases based on Software Requirements Specification documentation throughout Agile sprint cycles.
- Logged, tracked, and collaborated on defect resolution using Azure DevOps.
- Prepared execution and test-status reports for stakeholders across the testing lifecycle.

Client: CNA Lawyers Insurance — Policy & Claims Platform | Test Engineer
Java, Selenium WebDriver, Postman | Insurance | Nov 2021 – Nov 2022

- Performed functional, regression, and web-service testing for a professional liability insurance platform covering quoting, policy booking, and claims workflows.
- Performed API testing using Postman to validate backend services across quoting and claims modules.
- Developed diverse test datasets and documented defects with detailed reproduction information to support developer triage.
- Collaborated with client teams during knowledge-transfer sessions and delivered weekly status and defect-summary reports.

FRAMEWORK ENGINEERING

- Architected modular, layered Playwright automation frameworks using TypeScript and clean architecture principles.
- Structured frameworks into page, business/workflow, and utility layers for maintainability and scalability.
- Developed reusable configuration management, browser management, custom wait, logging, assertion, and reporting components.
- Implemented Page Object Model and base-page abstractions to standardize element interactions and minimize script duplication.
- Implemented retry, recovery, and exception-handling mechanisms for improved framework stability.
- Enabled parallel and multi-browser execution across Chromium, Firefox, and WebKit.
- Applied Factory, Singleton, Strategy, and Dependency Injection patterns within framework utilities.
- Established reusable coding conventions and automation utilities to support maintainability and onboarding.

AI-ASSISTED AUTOMATION

- Used GitHub Copilot and Claude Code to accelerate automation development, code review, debugging, and framework refactoring.
- Applied prompt engineering for test-case generation, synthetic test-data creation, and reusable automation utility scaffolding.
- Explored Model Context Protocol (MCP) concepts for AI-assisted and tool-integrated QA workflows.
- Applied AI-assisted debugging techniques to support root-cause analysis of failing and flaky automation tests.

KEY ACHIEVEMENTS

- Led end-to-end automation delivery for a client-facing Marriott engagement, including framework demonstrations and formal handover to client engineering teams.
- Developed reusable automation components across enterprise projects to reduce script duplication and long-term framework maintenance effort.
- Progressed from manual and Selenium-based testing to owning Playwright/TypeScript framework architecture across four enterprise client programs.

EDUCATION

Bachelor of Science (B.Sc.) — Computers | Vikrama Simhapuri University, Nellore, Andhra Pradesh, India
